

# Introduction to Programme Database (PDB/PDB2)

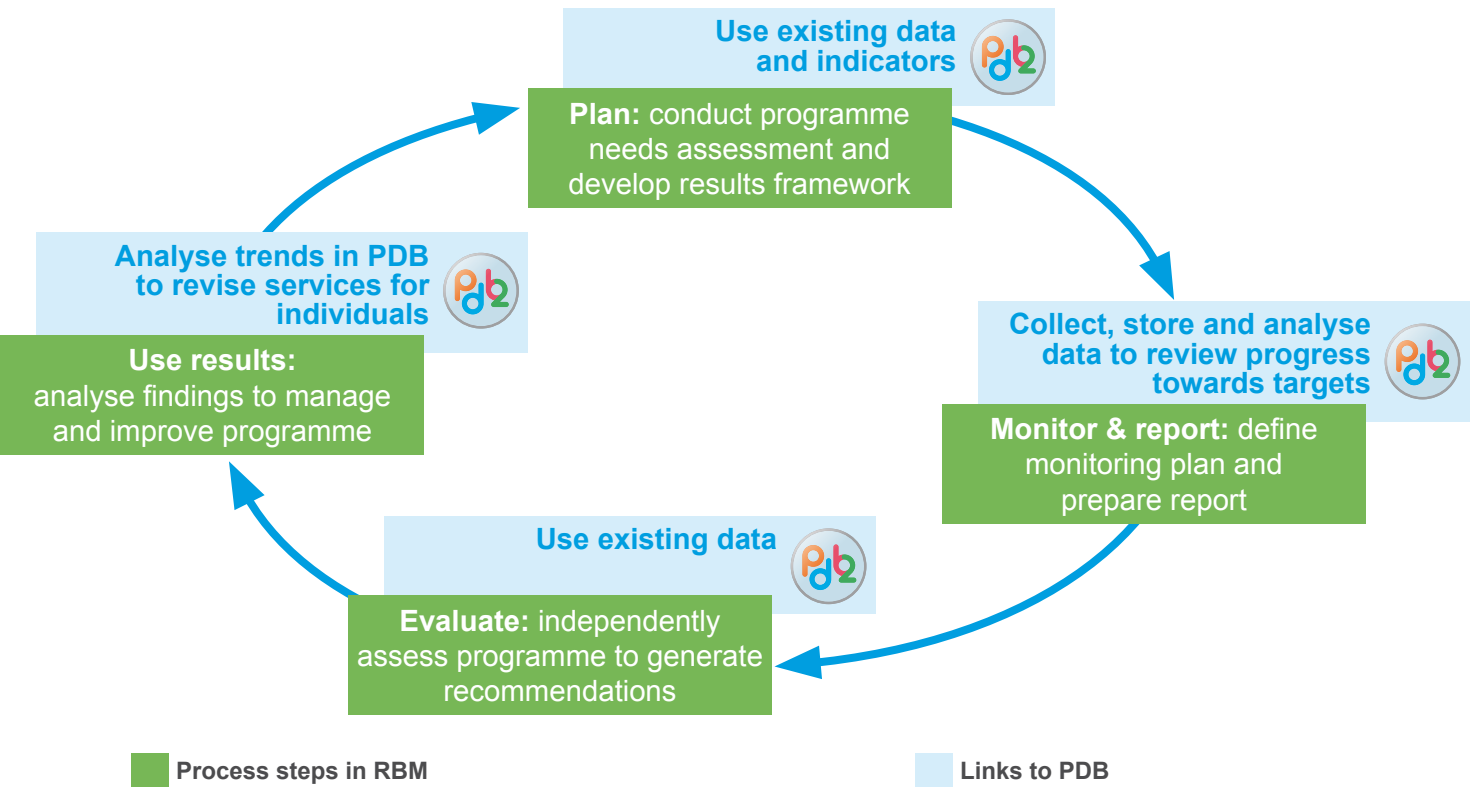

## Who has the PDB?

PDB is rolled out in approx. 100 MAs

## How PDB and RBM are linked?

PDB is a data source for programme management

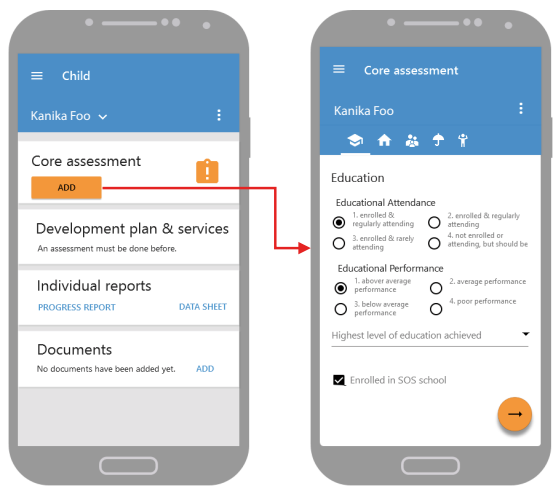

## How do we respond to challenges?

### Our challenges with the system

- Our monitoring systems should be more user friendly
- Programme staff spend too much time for collecting rather than using data to improve programmes
- Irregular data entries and reviews
- Lack of data quality

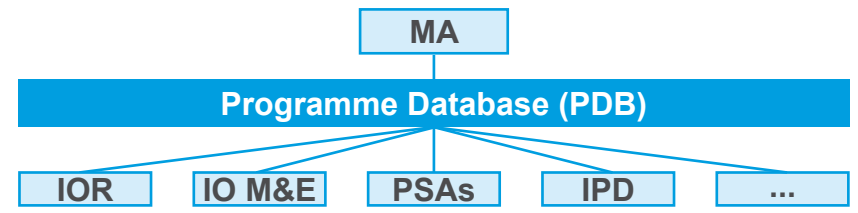

We build PDB2 to improve data quality

### Our challenges with the process

- MAs are overwhelmed by different data requests
- Lack of monitoring staff on location level to collect all requested data
- Lack of ownership of data in MA

We use PDB data to reduce MAs' workload

## What will I get from PDB2?

PDB2 is our tool to monitor case management
